## Maps may aid in flood preparation planning

**For Immediate Release:**

Release # 2011-06-09

June 7, 2011

Platte County staff has prepared maps showing digital contour elevations to aid residents, business and property owners with flood preparation planning.

The Army Corps of Engineers, Kansas City District has provided flood inundation maps at <http://www.nwk.usace.army.mil/Flood/InundationMaps.cfm>. The maps show a low and high flood level projection. Per the Army Corps of Engineers, the low projection is based on a local elevation of 752.5' and a high local elevation of 758.5'. The depiction of these levels, as provided by the Corps, does not accurately reflect the location of the corresponding local elevations in many cases.

The maps contained herein are provided to better assist Parkville area property owners with flood preparation planning. The maps show approximate locations of the 752, 754, 756, and 758 elevation contours. The contours contained hereon are taken from digital elevation models and are known to have a margin of error. These maps are to be used for planning purposes only. The City advises property owners in flood-prone areas, or who otherwise believe they will be affected, to consult with professional land surveyors, engineers or other qualified individuals if they wish to obtain reliable elevations and flood impact assessments.
